DETAILED ACTION

The Amendment filed on March 25, 2003 has been acknowledged.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2, 11, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Admitted Prior Art of Fig. 1 (APA).

APA discloses all the claimed features of the invention including:

- an apparatus (Fig. 1) comprising:

- a print head (12); a movable component (16) having a plate attached at a first end to a flexible cable carrier (14), said movable component being coupled to said print head (Fig. 1, page 1, line 20);

- an isolating component (18) attached to said movable component (since the side surface of 18 is flush with the side surface of 14 and 16 is attached to 14, 16

Art Unit: 2863

should also be attached to 18), to isolate uncontrolled movement and vibration of said flexible cable carrier from said head (page 1, lines 20-23);

- said isolating component is further attached to a cable carrier support (base below 18), said cable carrier support enable said flexible cable carrier to travel along said cable carrier support generally in parallel to movements of said print head (Fig. 1);

- said isolating component is further attached to said print head (via attachment means 20, Fig. 1).

Allowable Subject Matter

2. Claims 4, 5, and 7-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

3. Claims 3 and 6 are allowed.

Reasons For Allowance

4. The combination or method as claimed wherein an isolating component comprises a linear bearing track attached to a cable carrier support and a generally U-shaped channel attached to said movable component (claim 3) or attaching a pin to a movable component and attaching a receiver to a print head, said receiver being

Art Unit: 2863

configured to receive said pin (claims 4-6) is not disclosed, suggested, or made obvious by the prior art of record.

Response to Arguments

5. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.
